    - The instant application is deemed to be directed to a non-obvious improvement over the admitted prior art of the instant application and the invention patented in Pat. No. US 6,584,163, US 2003/0052709 and US 2004/0161067. The improvement comprises -

With regard claim 1, "wherein the dynamic phase alignment circuit further comprises a multi-phase sampling serializer-deserializer circuit operative to: sample the data signal at each of the plurality of clock phases; align the data signal at each of the plurality of clock phases to one of the plurality of clock phases; and deserialize the data signal to form an aligned byte of data associated with each of the plurality of clock phases." as recited in combination with other limitation claimed in claim 1,

With regard claim 16, "a phase-locked loop circuit that receives as input the clock and is operative to generate a plurality of clock phases; and a dynamic phase alignment circuit associated with each channel in the intellectual property block that receives as input respective data signals and the plurality of clock phases, wherein each dynamic phase

alignment circuit is operative to select a clock phase from the plurality of clock phases from which to align the respective data signals for output to each channel." as recited in combination with other limitation claimed in claim 16, and

With regard claim 22, "aligning the input data at each of the plurality of clock phases to one of the plurality of clock phases, and deserializing the input data at each of the plurality of clock phases to generate an aligned byte of data associated with each of the plurality of clock phases;" as recited in combination with other limitation claimed in claim 22.
